

Customer Notice

We were unable to test your vehicle for the following reasons:

Sample Dilution - Our equipment could not detect your vehicle's exhaust. This indicates a problem with the exhaust system or engine. We recommend that you take your vehicle to a repair technician before returning for your emissions check.

Driveability or Safety Concern - Your vehicle's alignment or another equipment concern, has prevented us from conducting the emissions check. For your safety we recommend that you take your vehicle to a repair technician before returning for your emissions check.

Drive Train Noise - Loud noises are coming from your vehicle. Checking your vehicle in this condition could damage the vehicle. For your safety and others we recommend that you take your vehicle to a repair technician before returning for your emissions check.

Fluid Leaks - A significant amount of fluid was found leaking from your vehicle. Checking your vehicle in this condition could damage the vehicle. We recommend that you take your vehicle to a repair technician before returning for your emissions check.

Missing Gas Cap - An emissions check will not be conducted on any vehicle that is missing its gas cap. We recommend that you purchase a gas cap before returning for your emissions check.

License Plate _____ VIN _____

Vehicle Make _____ Model _____

Mileage _____ Number of Cylinders _____

Management Signature _____

Information only: Please notify the Bureau of Motor Vehicles

Incorrect Vehicle Identification Number (VIN) - This may cause serious problems identifying your vehicle if it is ever stopped by the police, stolen, or involved in an accident.

We recommend that you ...

1. Check the VIN on your vehicle's title. If it is wrong there, please have the title corrected at the License Branch.
2. Take the Vehicle Inspection Report, your vehicle title, and your current registration to the License Branch. Ask the clerk about the procedure to correct the error.
